## Who can manage your four walls if you can't?!

Apartments, chambers, studios, practices, offices, summer houses – they all have something in common: they are easy prey for burglars. Doors, locks and windows are soft spots, which professionals will crack within moments – and often without making a sound. The most popular time for burglars to break into private premises is the morning. Places of business are usually emptied at night. During holiday periods, of course, there is always cause for alarm...

**MOSRO MINI**  
**Guards all you treasure**  
Via its camera and highly sensitive sensors the mobile surveillance robot has your premises completely within sight, sounds the alarm and supplies images online directly to your PC or your handheld.

**Flexible and dead easy to use**  
Just use MOSRO MINI in all the places where you want to stay in control. Even if it is „only“ concerning the sleeping baby, the newly born kittens or ongoing renovation...

**MOSRO MINI.**  
**Only 28.5 cm high.**  
**Simply set up at its place of action and switch on surveillance.**

**Height: 28.5 cm**  
**Width/Depth: 80 mm**  
**Weight: ca. 750 g**  
**Casing: Acryl**

Video camera

3 Infrared scanners  
Motion detection  
in 100% darkness

Heat, smoke and gas  
sensors (optional)

Individually  
programmable  
with an area for  
development

sound output

DECT radio module

**MOSRO MINI: Uncomplicated installation. Flexible and usable in any place. Steering via Windows or Linux.**

**Most intelligent robotics in miniature format**

■ The fully automatic driving robot moves independently through your premises. ■ The robot is individually tuned for its place of action in only a few minutes. ■ It can safely and reliably circumvent furniture, work equipment or other obstacles.

**High-tech in a unique combination**

■ Three infrared scanners supply you with motion detection messages – even in 100% darkness. Modern heat, smoke and gas sensors are many times more sensitive than normal human perception. ■ Via the integrated video system you can watch the surveillance area any time online. Additionally, all events are recorded in the picture archive.

**Reliability at its highest level**

MOSRO MINI informs you online, by phone and/or SMS about potential events of danger. If you wish, the information will be directly forwarded to the emergency switchboard. Invaders are – by experience – already driven away by the alarm siren and an oral warning.

**€ 1,200**  
Price of basic equipment
